Keep Talking KEY

Name _____

Work with a partner. Compare answers when you finish each problem.

1. What is wrong with this answer? Circle 3 hard words.

> Photosynthesis is the biochemical process by which photoautotrophic organisms convert electromagnetic radiation into chemical energy, synthesizing glucose from carbon dioxide and water while releasing molecular oxygen as a byproduct.

What would you type next? Explain it in simple words. Use 3 short sentences.

2. The chat is the prompt.

When I send a new message, the chatbot reads the whole chat again, from the top.

All the words a chatbot can read at one time are its context window.

A new chat starts over. It cannot see the old chat.

3. The follow-up challenge. My topic: Answers vary.

Score each answer: 1 = I cannot use this. 5 = I can use this today.

	What I typed	**Score 1 to 5**
First answer	"What is photosynthesis?"	
Move 1	Explain it in simple words.	
Move 2	Give me an example.	
Move 3	Make it a list.	

The move that helped the most: Answers vary.

4. The new chat test. Ask: “What topic did I ask about?”

In the **same** chat, it said: Answers vary. It named my topic.

In a **new** chat, it said: Answers vary. It did not know.

Why? A new chat starts over. The old messages are not part of the prompt.

5. Careful when you push back.

If I type “Are you sure? I think that is wrong,” a chatbot may change a right answer.

Why? It predicts what comes next. An answer that agrees with me is a likely next answer.

To find out if an answer is true, I should check a real source.

6. Talk about it. A chatbot that **always** agrees with me is (helpful / dangerous) because

Answers vary. It would agree with wrong ideas and never tell me I made a mistake.
