Train Your Own AI KEY

Name _____

Work with a partner. Compare answers when you finish each problem.

1. What should it learn? Two things I could teach a camera AI to tell apart:

1. Answers vary. 2. _____

2. How it works. Match each Teachable Machine word.

Teachable Machine	What it means
Class	one kind of thing: a label, like “rock”
Samples	the training pictures for a class
Train Model	the network fixes its weights
Preview	testing it on new pictures

It learns fast because it starts from a network that already learned from millions of pictures.

This is called transfer learning.

3. Train it.

Class name	Number of samples	Did the preview get it right?
Rock	about 50	
Paper		
Scissors		

4. Fool it. Change one thing at a time.

What I changed	What the AI said	Fooled? (yes / no)
my other hand	Answers vary.	
very close, then far away		
lights off or a bright window		
my partner's hand		
a new background		
_____		

Why did some tricks fool the AI? It never saw anything like them in its training pictures.

An AI is only as good as its training examples.

How could you make it harder to fool? Add more kinds of examples and train again.

5. Talk about it. Would your AI work for everyone?

My training pictures were missing Answers vary. Other people's hands, other light, ...
