Making Pictures with AI KEY

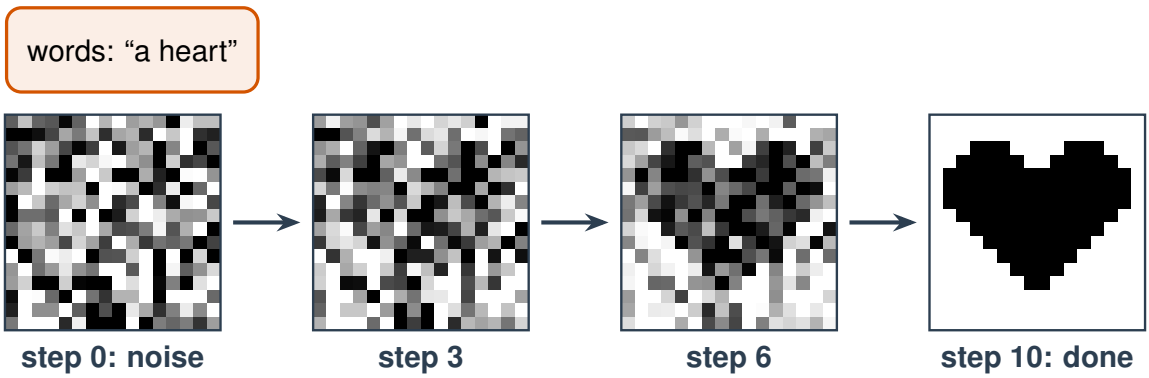
Name _____

Work with a partner. Compare answers when you finish each problem.

Word bank: diffusion noise words

You can use a word more than once.

1. Find the picture in the static. Cover the last square. At which step can you guess the picture?



My guess at step 3: Answers vary. My guess at step 6: a heart

2. From noise to picture.

Training: the computer adds noise to millions of pictures. A neural network practices guessing which part of the picture is noise.

Making a picture: the AI starts with pure noise. It removes a little noise at a time, again and again. My words guide every guess. This is called diffusion.

Why does the same prompt make a different picture each time? It starts from new random noise each time.

3. The noise demo.

I could guess the picture at step Answers vary.

New noise, same words: what changed? The colors and the place. Same kind of thing.

Same noise, new words: what changed? The whole picture.

4. Real people. Why should I never make AI pictures of real people? A fake picture of a real person can hurt them, even as a joke.

5. Talk about it. An AI picture (is / isn't) art, because Answers vary.

The credit should go to Answers vary. The person, the company, or the artists who trained it.

Go Further (Day 2). My picture prompt.

Subject	a small orange cat
Action	reading a book
Place	in a library at night
Style	watercolor painting
Details	warm yellow light

We made it twice. How were the two pictures different? Answers vary.

I changed the style to Answers vary. What changed? _____

One mistake in a picture: Answers vary. Wrong number of things, words spelled wrong.
