Asking Good Questions KEY

Name _____

Work with a partner. Compare answers when you finish each problem.

1. What did they really want? Write what each person should have typed.

They typed	What they really wanted
"Help with my essay."	A good first sentence for an essay about his home country, due tomorrow.
"Explain volcanoes."	A short, simple explanation for a 6th grader with a test on Friday.
"Give me a recipe."	A 20-minute recipe with rice, eggs, and onions.

2. The three parts of a prompt.

Task	What do you want the AI to do?
Context	Who are you? What is it for? What do you already know?
Format	What should the answer look like?

Write **T**, **C**, or **F** on the line after each part of Kofi's prompt.

"I am in 10th grade." C ____ "Give me 3 reasons why dogs make good pets, with one short example each." T ____

"This is for a 1-minute speech." C ____ "Use simple words." F ____

Why does more context give a better answer? The chatbot uses every word I type to predict its answer. With context, it predicts an answer for me, not an average person.

3. Keep it private. Three things I should never type into an AI tool:

my address or phone _____ passwords _____ private facts about others _____

4. Fix a weak prompt.

Weak prompt: Tell me about dogs.

My better prompt:

Task	Give me 3 reasons dogs make good pets.
Context	I am in 10th grade. It is for a 1-minute speech.
Format	One short example each. Use simple words.

Compare the two answers.

	Weak prompt	**Better prompt**
How long was the answer?	very long	short
Could I use it? Score 1 to 5	Answers vary.	
One thing I liked		

The part that helped the most was the Answers vary. because

5. Talk about it. Some people get better help from AI because they know how to ask.

It is (fair / not fair) because Answers vary.

People who could be left behind are Answers vary. People who read less English, ...
